- 0-7/7-14/14-30.....

The screenshot shows a software interface for warehouse analysis. On the left is a blue sidebar menu with various management options. The main area displays a '库存分析-产品' (Inventory Analysis - Product) report. At the top, there are filters for '物料' (Material), '物料描述' (Material Description), '仓库' (Warehouse), 'BU' (Business Unit), and '客户' (Customer). Below these filters is a summary table with columns for different time intervals: 0-7天, 7-14天, 14-30天, 30-60天, 60-90天, 90-120天, 120-180天, and 180天以上. The '120-180天' and '180天以上' rows are highlighted with red boxes. Below the summary is a detailed table with columns for '物料编号' (Material No.), '物料描述' (Material Description), '规格' (Specification), '仓库代码' (Warehouse Code), '仓库名称' (Warehouse Name), '现有库存' (Current Inventory), and '单位' (Unit). The table lists several materials with their respective specifications and inventory levels.

5.

This section contains a collage of four overlapping screenshots from the same software interface. Each screenshot is annotated with a yellow label: '成品' (Finished Goods) on the top-left, '零返' (Zero Return) on the top-middle, '不良' (Defect) on the bottom-left, and '冻结' (Frozen) on the right. The screenshots show various data tables and filters, likely related to inventory management and quality control.
